

"The performance of Norman Security Suite is impressive. Both the real time scanner and the personal firewall outrivals the competitors in this test. There's no latency at all in the real time scanning compared to an unprotected system."

NORMAN[®] Security Suite

Protection against Internet threats

Norman Security Suite is a set of security programs to guard you against Internet threats such as viruses, worms, trojans, spyware and hackers. This easy-to-use software will protect you from inappropriate content, rootkits and other hostile activity, whether you are using on-line banking, chatting, emailing, playing games or just surfing the net.

✓ Proactive Malware Protection
SandBox technology detects and fights new and unknown threats such as viruses, trojans, worms and root kits.

✓ Spyware Protection
Protects you against malicious spyware and malware including key loggers, hijackers, downloaders and root kits.

✓ Parental Control
Protects you and your family from accessing undesirable websites, such as those containing pornography, weapons or other inappropriate material.

✓ Personal Firewall
Provides real-time protection against hackers and web robots by filtering inbound and outbound traffic as well as alerting you of any attempted intrusions.

Features:

- Antivirus
- Norman SandBox
- Rootkit detection
- Antispyware
- Parental Control
- Personal Firewall
- Antipharming

Product benefits

- **Automatic Virus & Spyware protection** recognizes, blocks, and removes unwanted programs such as viruses, worms, trojans and other varieties of destructive program code. These unwanted programs, also called malware, can jeopardize your privacy and identity, and reduce computer performance.
- **Proactive malware protection** using Norman SandBox technology keeps your personal data free from new unknown viruses, trojans, worms and other malicious programs.
- **Protects e-mail**, instant message attachments, Internet downloads, and web browsing from malware like viruses, spyware, trojans, and other threats that may enter your computer.
- **Parental Control protects** your family by limiting access to specific web sites. The system is based on pre-defined rules preventing selected user groups from accessing undesirable websites containing pornography, weapon information, or other inappropriate material.
- **Advanced Personal Firewall** provides real-time protection against hackers and malicious web robots by filtering inbound and outbound traffic as well as alerting you to any attempted attack.
- **Antipharming protects** the user's HOSTS file against tampering by malicious applications.
- **Protection against malware masquerading** as an authorized application by utilizing a check summing technique.
- **Auto-update of all modules** runs silently in the background, as any new security update will automatically be downloaded and installed silently.

What is Norman SandBox?

All Norman antivirus and antispymware products use Norman SandBox technology. The Norman SandBox is a virtual environment where programs may "run" without interfering with the real processes, program files and network environment. If a program performs an action that the SandBox regards as suspicious, the program is denied access to your computer.

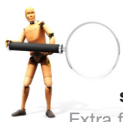

Always protected!
When connected to the Internet the Suite keeps itself updated, protecting your PC with an always up-to-date security shield.

Norman supports you!

Norman offers support through a number of channels such as phone, e-mail, through our website, or via the Norman Forum. We communicate with you in your own language and our goal is to provide fast and efficient solutions to your queries.

BONUS! New anti-malware enabled screensaver

Extra feature in this package is an on-demand antivirus and antispymware screensaver scanner. This scanner will start to scan all available drives once the screen saver kicks in, making sure your data are malware free before you access them.
